JOHNNY WONDER

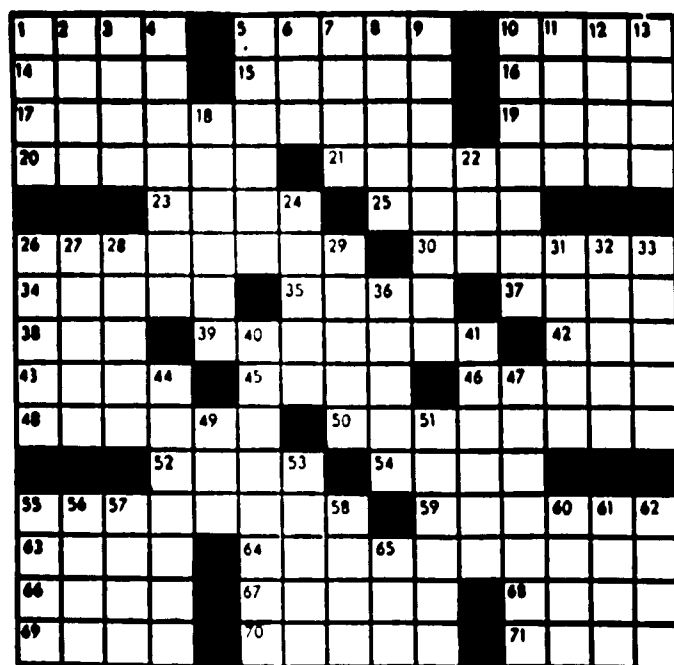

Q. "WHY IS A DIME SMALLER THAN A PENNY?"

SUSAN TORREZ OF CLAREMONT, CA., WINS A PRIZE FOR THIS QUESTION.

A. The answer is that in the early days of coins, silver was used in making dimes and other high-value coins. Each coin had a certain value, depending on the amount of precious metal it contained. A dime, for instance, contained exactly ten cents' worth of silver. Thus, a silver dime was ten times more valuable than a larger penny made from less valuable copper. Today, coins are made from less precious metals, and their face value is greater than the value of the metal they contain. But most coins are still minted in the old sizes most familiar to us.

You can win a World Almanac if you question is selected. Send your name and age to JOHNNY WONDER, c/o this newspaper, P.O. Box 1250, Santa Cruz, CA 95061
